Executive Summary.:

We all have grown up watching many shows.one of my favourite shows was Pokémon choose Pokémon dataset which says all about Pokémon's behaviours, type, when they born, Their strength and HP. I am very excited to build and show in visualized it

1. It is an interesting topic to visualized for me as I can show various types of Pokémon and also various strength which tells about Attack and Defensive skills also HP

2. This project is intended to the audience who love to watch Pokémon and also to those who want to know them

3. The dataset consists of Type of Pokémon, Attack and defence skills, HP of Pokémon and also when they born

4. The very first step to move ahead will be describing the Type of Pokémon in visualized way i.e. by chart than give comparison of strength and also other factor which affect surviving skills

5. The challenge that might be facing is how and what all things to compare and make a meaning full chart and also get the information out of it
